Education

Sambalpur University Institute of Information Technology

2020 – 2024

Bachelor of Technology in Computer Science Engineering

9.6 CGPA

Rotary Public School

2018 – 2020

Higher Secondary Education (CBSE)

9.2 CGPA

Technical Skills

Languages: Python, C, C++, SQL, HTML/CSS, JavaScript, R, Bash

Developer Tools: Visual Studio, GCP, CI/CD Pipelines, Anaconda, Docker, Jupyter, Tableau, Power BI, Bootstrap

Technologies/Frameworks: Linux, Git, GitHub, Excel, Google Bigquery, MySQL, Apache Spark, NumPy, Pandas, SciKit Learn, Shaply, Statsmodel, NLTK, SciPy, OpenCV, Keras, Matplotlib, Seaborn, Plotly, Hugging Face Transformers, Langchain, Pytorch, Tensorflow

Experience

Logical Analytix

Feb. 2024 – Sept. 2024

Data Analysis Intern

Remote

- Developed the Python script using yfinance library for stocks insider breakout strategy to automatically detect the insider and breakout candles date of stocks provided in order to count the stoploss and target hits to calculate the success rate of the stock with an **98%** accuracy.
- Incorporated Python scripts with automation for the buy-sell backtest of the *Nadaraya-Watson-Envelope* using gaussian smoothing function to get the data about buy-sell signals on close price in-order to track the returns of Nifty500 stocks.
- Pre-processed time series MRD data by generating missing timestamps, imputing missing values using KNN-Imputer, handling categorical variables with one-hot encoding, and applying scaling and dimensionality reduction (*capturing 99% variance*) through a column transformer pipeline to prepare the data for modeling.
- Developed a Gaussian-Mixture Model for customer segmentation using the Expectation-Maximization algorithm, incorporating t-SNE for dimensionality reduction to improve clustering performance and visualizations.

Freelancing

2023 – 2024

Data Analysis, Data Science

Remote

- Developed a purchase order dashboard for a machinery-based MNC using real-time data in Excel, integrating advanced features such as dependent dropdowns, KPI cards, dynamic charts, and custom gauge charts, to monitor and optimize their purchase order workflow, fully aligned with client requirements.
- Developed a RESTful API for a client who wanted his business website to have backend in Python and connected the website to MySQL database for information retrieval.

Projects

LinkedIn Jobs Scraper | Python, BeautifulSoup, Requests, Pandas

[Github](#)

- A webscraping program designed to scrape real-time job postings from LinkedIn that simplifies the job search process.
- It processes and cleans the scraped data, exporting it to a CSV file, and takes only two inputs i.e location and job-type.
- It provides information such as job-title, job-location, job-function, company name, industry, seniority-level, etc.

Olympics Games Dashboard | Excel

[Github](#)

- It is a comprehensive and interactive tool designed to provide detailed insights into the Olympic Games 1896 - 2020.
- Shows statistics about the Olympics, including the performance of countries, sports, participants, medals over the years.
- Uses powerful features of Excel, such as dependent dropdowns, dynamic charts, slicers, and section navigation buttons, this dashboard offers a seamless and engaging way to analyze Olympics data.

HealthCare Provider Dashboard | PowerBI, DAX

[Github](#)

- Used healthcare data of England, divided into three reports: financial analysis, trend analysis, and provider analysis.
- Added features such as dynamic charts, dedicated filter panes, light-dark mode switch, for enhanced UI.
- Displayed KPIs and metrics related to billing, medication, treatment, room charges, and insurance, for gaining insights.

Movie Recommender System | Python, ML, NLP, Streamlit

[Github](#)

- Built using content-based filtering by preprocessing data with column transformations, feature engineering, scaling, etc.
- Utilized NLP techniques like stemming (NLTK) and vectorization to extract similarity matrices with cosine similarity, enabling the model to recommend the 5 most similar movies based on previously watched movie.
- Deployed the model using Streamlit and serialized it with Pickle for efficient web-based interaction.
